## CAREER OBJECTIVE

I am a developer with hands on experience on designing, developing and implementing applications and solutions using a range of technologies and programming languages. My objective is simple just be best in what i am capable of and idea about my field, i am dedicated in my work and also to perfecting my craft by learning from different sources and seek different and challenging roles within my capability and related to my field.

## PROJECTS

### 1) E-Commerce Website

I have created these website using Html, CSS, JavaScript and API and it is UI of an online Shopping Brand where you can basically shop and place order and checkout like a normal online shopping website

### 2) TASK MANAGEMENT

So, in these particular project we have used Spring Boot and Angular 7 web application, python and java as main programming language used in various aspect.

Task management system is a demonstration web application where users can tasks within a team easily, Developed on Spring Boot( backend) with Angular V7 (frontend) frameworks and MySQL database. and project is focused primarily on handling document based projects

User can be a member of more than Programs and one program can have any number of User members associated with it. This web application is made secure and robust. I have implemented JWT- based Authentication on every APIs

### 3) Restaurant App

This project is bootstrapped with React App and you can run the project directory in npm start, where the app can be run in development mode as in your personal browser and to test the application we can type npm test and to npm run build to build the app is ready to be deployed.

### 4) Stock market prediction

This is a code for stock market prediction by AI and is done by google Colab This is a 10 yrs of Historical price data from Dow Jones and the news headlines from New York times articles to predict future prices.

Pandas, xgboost and matplotlib.pyplot are the dependencies of the project

### 5) Music app

It is an app which is duplicate version of Spotify, in these project we use Html, CSS, JavaScript which is a playlist of your music where u can listen music anytime and anywhere.
